

### **Launches Recrylic and Recrylon acrylic fibres for manufacturing fabrics with year-round wearability**

April 14, 2003: Reliance Industries, the largest producer of polyester fibre in India and the world's second largest producers of polyester fibre and yarn, has launched two improved lines of acrylic fibres in India, under the brand names *Recrylic* and *Recrylon*. The R&D teams of Reliance and Indian Petrochemicals Corporation Limited (IPCL), a Reliance Group company, have jointly developed these fibres.

*Recrylic* is ideal for manufacturing shawls, sports wear, socks, and hosiery. *Recrylon* is preferred for manufacturing hosiery, blankets, carpets, furnishing fabric, and dress materials, among other applications. Both fibers have superior moth resistant capabilities with low specific gravity and high bulk, which enables production of lightweight garments.

Both *Recrylic* and *Recrylon* are available to spinners and composite mills countrywide through Reliance's vast network. In addition, customers of *Recrylic* and *Recrylon* will benefit from Reliance's streamlined and integrated support for technical services, like processing guidance, testing services, providing solutions, new product and new application developments, and even fashion trends.

*Recrylic* and *Recrylon* will be produced at the integrated plants of IPCL, which has capabilities to produce over 24,000 TPA of these fibres. Apart from offering these brands to the domestic market, Reliance will also be exporting them to the quality conscious European markets.
